

ABSTRACT OF THE DISCLOSURE

A welding implement comprising a torch having a flexible torch head. The torch head is operable to conduct electricity to a welding electrode disposed within the torch head. The welding implement may comprise a gas supply tube and a coiled wire spring operable to flexibly couple the gas supply tube to the torch head. The welding implement may comprise a torch that directs a fluid to flow axially through a spring coupled the torch head. The welding implement may also comprise a torch comprising a torch head and a tripod support system to flexibly support the torch head. Each of the legs of the tripod support system may comprise a spring.
